```

```
As a Security Engineer, my primary responsibilities include:

1. Developing and implementing security protocols and procedures
across all IT departments.
2. Regularly auditing the company's systems and network, identifying
possible threats or vulnerabilities.
3. Ensuring data and network security are maintained at all times.
4. Installing, configuring, and supporting security tools such as
firewalls, anti-virus software, and patch management systems.
5. Keeping abreast of the latest developments in IT security and
ensuring that the organization responds swiftly to new security
threats.
6. Conducting both routine and irregular security checks for any
possible network breach.
7. Carrying out risk assessments and make recommendations for
improvement.
8. Ensuring compliance with relevant security-related regulations and
protocols.
9. Responding promptly and effectively to any security incidents.
10. Providing training and guidance to colleagues on information
security matters.
11. Documenting any security breaches and assessment the damage they
might have caused.
12. Implementing strategies to lessen the risk of future security
```

breaches.
